

Congratulations on Purchasing your **Ross Round Super Kit!** Here is what you need to know to get started!

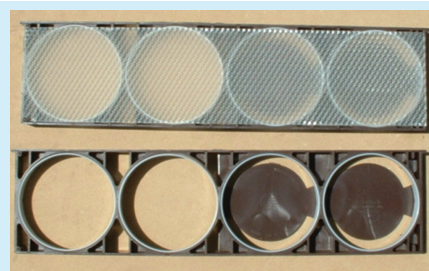

Included in your kit are your super, your frames and your rings. Foundation is purchased separately, and also needed to begin.

Step 1: Open your frame, They open like a clam shell, and lay the two halves flat as shown above.

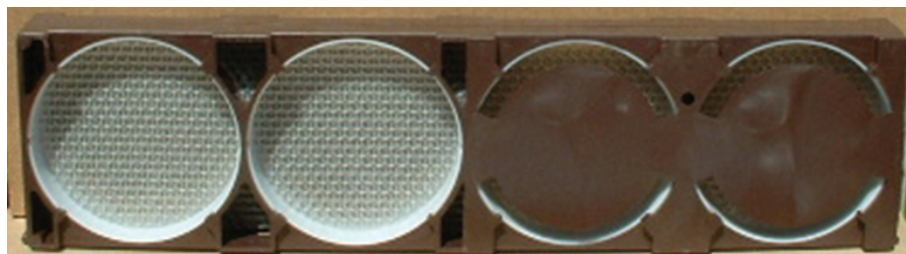

Step 2: Place a ring on each cavity, positioning the ring with the notch side down. If the ring is positioned properly, it will fit down snug and flush without force.

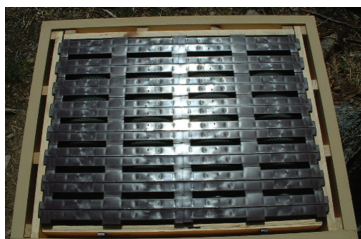

Step 3: Lay your foundation sheet on one half of your Ross Round Frame. Then close the frame with the foundation between the two halves.

(If you have a new kit, the frames are pre-loaded with rings.)

Your loaded frame should look like this.

Now load your frames into your super,*with the follower board and springs in place, let your bees do the rest.
